## Excluded Drug Tables

### Examples of Non-Preferred Medications with Selected Preferred Alternatives

The excluded medications shown below are not covered on the formulary. In most cases, if you fill a prescription for one of these drugs, you will pay the full retail price. Please note that product placement on this list is subject to change throughout the year based upon market dynamics, new indications for existing products, and new product launches. The list below is not a complete list of all products considered excluded drugs by Kroger Prescription Plan; in most cases, multi-source brands are excluded from coverage with preference given generic equivalents.

**Take action to avoid paying full price.** If you're currently using one of the excluded medications, please ask your doctor to consider writing you a new prescription for one of the following preferred alternatives. Additional covered alternatives may be available. Costs for covered alternatives may vary. Not all the drugs listed are covered by all prescription plans; check your benefit materials for the specific drugs covered and the copayments for your plan. For specific questions about your coverage, please call the number on your member ID card.
